All Model Years/All Models – Wiring Connector Service Repair Kits

In continuing with customer focus, FCA would like to reinforce awareness of the availability of Wiring Service Repair Kits. These kits are used to repair large and medium size Wiring Harnesses (with a kit), which comes in a small plastic bag with the appropriate connectors or leads that may have been damaged, instead of replacing the entire Wiring Harness.

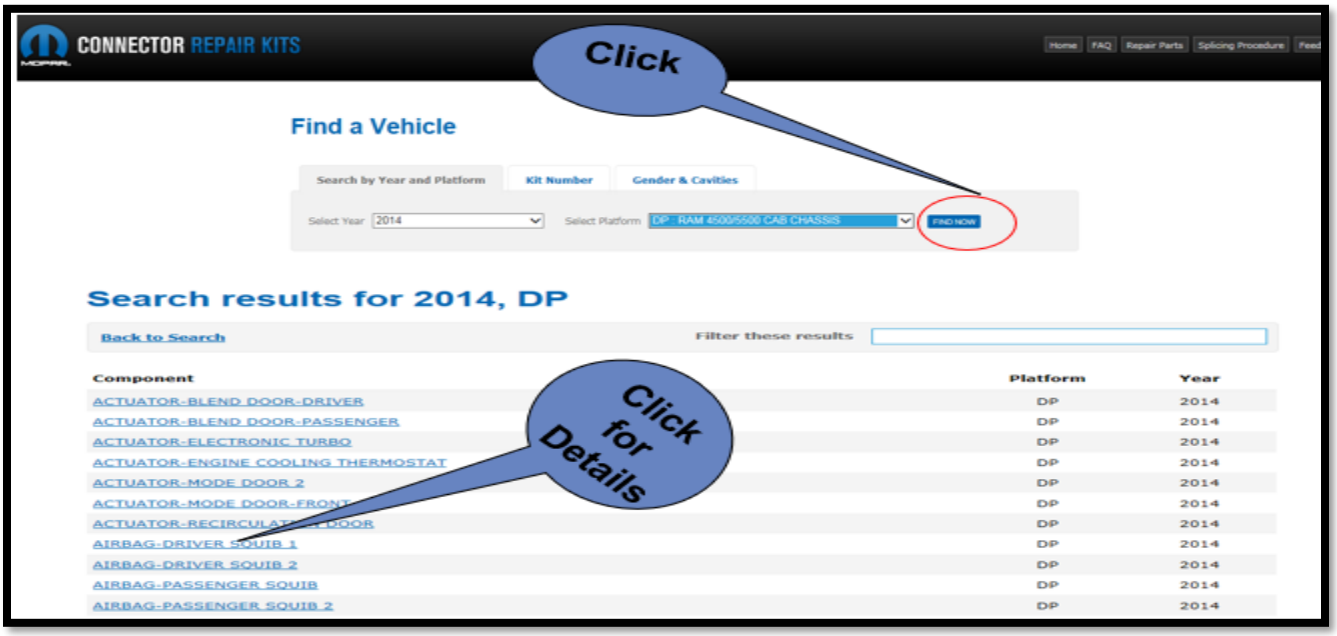

A screenshot of the wiring repair kit from the Mopar Connector website is below.

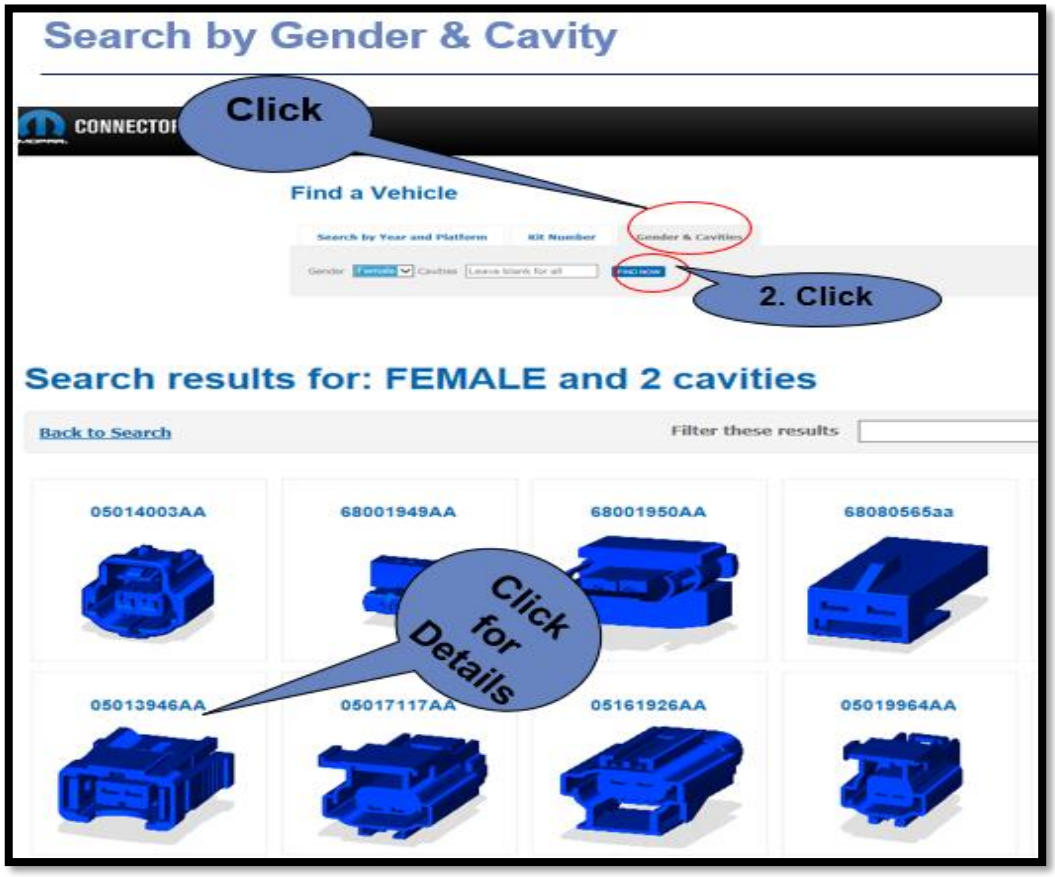

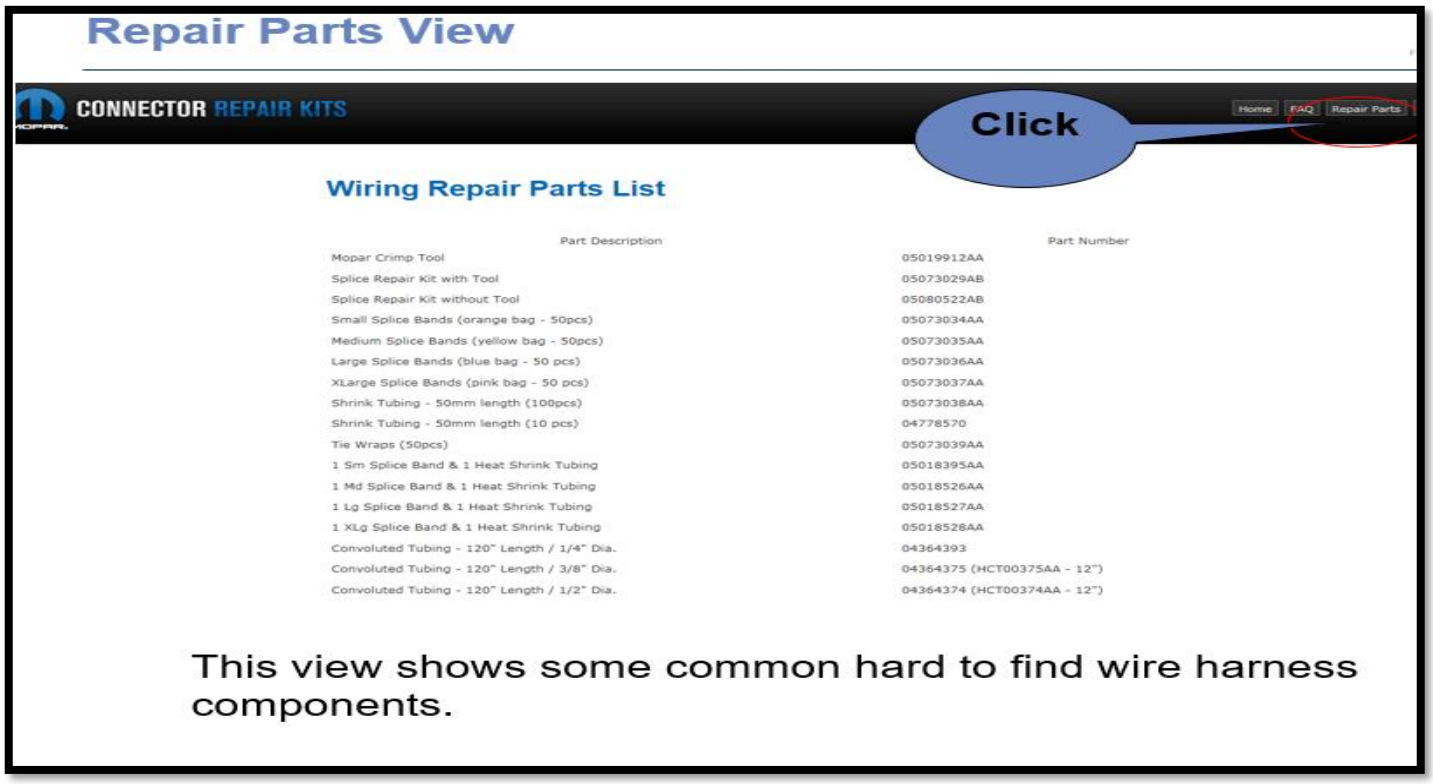

Some of the benefits for the customer of using the Wiring Service Kits are a less expensive and intrusive repair, reduction of collateral damage such as buzzes, rattles and squeaks, and reduced lead time compared to the full harness.

Info on best practices on how to find the proper repair kit and any other tips and tricks are in the screenshots below.
